

RFJ080-1-15-x

RF Driver / Amplifier

3722

The RFJ080-1-15 is a combined 80 MHz oscillator and power amplifier suitable for driving Isomet acousto-optic modulators such as the M1377-aQ80 series. This driver features both digital and analog modulation inputs for the control of the RF amplitude. Protection includes an internal over temperature sensor, and a 'Tranzorb' over voltage diode on the DC supply input. An external interlock (or RF enable) input is provided.

The driver will operate from a +24V to +28Vdc supply. LED's indicate the status of the thermal interlocks, DC supply and the RF power activity. The RF output power limit is adjusted by means of a pre-set potentiometer.

The amplifier is conduction cooled through the base and must be mounted to heat conducting surface.
