

## RA2(3)(5)-z-40-1-30 RF Driver / Amplifier

3025

The RAx-40-1-30 drivers are combined 40 MHz oscillator and power amplifiers. The -BR option is recommended for brass and copper cased acousto-optic modulators such as M1202C and M1208C. The standard configuration features both digital gate and analog modulation inputs for the control of the RF amplitude. Protection includes an internal over-temperature sensor, and a 'Tranzorb' over-voltage diode on the DC supply input. An external interlock input is provided for connection to the AO device thermal interlock sensor.

Active modulation	Model	Modulation Input
Digital only	RA2-	5V logic compatible
Analog only	RA3-	0 - 10V *
Dual	RA5-	both, as above

This driver will operate from a +24V to +28Vdc supply. LEDs indicate the status of the thermal interlocks, DC supply and the RF power activity. The RF output power limit is adjusted by means of a pre-set potentiometer.
